

Magnetic Filters and Dirt Traps

MFR/MFF/MFT

- p_{\max} : PN40
- t_{\max} : +200 °C
- Screw thread: G 1/4 ... G 4
- Screw thread: Rp 1 ... Rp 2
- Flanges: DN 50 ... DN 200
- Solder connections:
22 mm ... 35 mm
- Material: brass, stainless
steel, bronze, cast iron
- Mesh sizes:
50 μm ... 1200 μm

Description

KOBOLD magnetic filters are used in many applications, including central system filters, where it is necessary to protect devices from dirt and contamination. They are used to catch and remove contaminants from industrial cooling and lubrication circuits, especially where residue and sediment from assembly (such as chips from thread-cutting) and normal operation (such as scale and residue from frictional wear) can be carried along in the medium being filtered. Contaminants of these types can form deposits that can cause pitting and corrosion in highly sensitive measuring and control devices. Regular maintenance and cleaning of the magnetic filter inserts will effectively prevent system and device failure and the resulting downtime.

Function

The medium being filtered with these devices first flows around the centrally positioned bar magnet and then passes through – from the inside out – the stainless steel filter cartridge. The bar magnetic attracts and retains larger ferrous particles, thus making the magnetic filter easier to service. Larger, coarse pieces of material are trapped by the filter cartridge. The selected mesh sizes, from 150 to 1200 μm , ensure that the filter does not get clogged with fine sludge and causes only a minor pressure loss.

Magnetic filter, female thread, MFR-00

Adapter magnetic filter, female thread, MFT-I

Flange magnetic filter, MFF-

Adapter magnetic filter, threaded connection, MFT-A, MFT-L

Materials

Screw-on magnetic filter: body bronze
 Adapter magnetic filter: body brass
 Flange magnetic filter: body cast iron, coated
 Filter cartridge: stainless steel
 Magnets: oxide ceramic
 Gasket: Klinger Sil® C-4300

Mounting

Screw-on magnetic filter: horizontal or vertical
 Adapter magnetic filter: horizontal
 Flange magnetic filter: horizontal or vertical

Maintenance

First check after being put into operation. Thereafter, frequency of checks are dependent on actual rate of contamination, with at least one check per year.

Cleaning

Clean with water stream/compressed air and brush.

Technical Details

Thread connection: female thread G ½ ... G 3
 male thread R ¼ ... R 1 ¼
 (according to DIN 2999)
 Solder connections: 22 mm ... 35 mm
 Flanges: according to DIN 2533
 DN 50 ... DN 200

Nominal pressures

Screw-on magnetic filter: PN 16
 Adapter magnetic filter: PN 10
 Flange magnetic filter: PN 16

Max. temperature

Screw-on magnetic filter: 200 °C
 Adapter magnetic filter: 90 °C
 Flange magnetic filter: 200 °C
 Mesh size: see table

Technical Details MFR-female thread (brass version)

Design: two-part screwed body
Connections: female thread G 1/4 ... G 4
DIN ISO 228
Nominal pressure: see table
Temperature range: max. 90 °C (water)
-15 °C ... 110 °C (air)
Mesh size: see table
Mounting position: cover toward bottom,
note specified direction of flow

Materials

Body: brass Ms 58
Cover: brass Ms 58
Mesh: stainless steel AISI304
Cap seal: NBR
G 2 1/2 ... G 4 = Betaflex 71
cellulose with NBR
